Summary

Aspiring AI Engineer passionate about Machine Learning, Generative AI, LLMs and Agentic AI. Built end-to-end ML applications including Student Performance Analyzer and Mental Health Prediction System. Currently building Custom GPTs and exploring RAG, LangChain, LangGraph and AI Agents.

Project Experience

AI & Machine Learning Projects (Personal Projects)

Built and deployed Student Performance Analyzer and Mental Health Prediction web apps using Python, Scikit-learn, FastAPI and cloud deployment. Worked on preprocessing, feature engineering, training, evaluation and REST APIs.

Generative AI Projects

Currently building Custom GPTs and experimenting with LLMs, RAG, Agentic AI, LangChain and LangGraph.

Multi Agent Research Application (Personal Project)

Built a Multi Agent Research Application using LangChain, LangGraph and LLMs. The application orchestrates multiple specialized agents to perform web research, extract, analyze and summarize information collaboratively. Implemented task routing, state management and workflow orchestration to deliver accurate, structured research outputs.

Projects

- Student Performance Analyzer Web App
- Mental Health Prediction System
- Custom GPT (In Progress)
- Multi Agent Research Application

Skills

Python, SQL, HTML, CSS, JavaScript, Machine Learning, Deep Learning, Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, FastAPI, REST APIs, Git, GitHub, PostgreSQL, MySQL, LangChain, LangGraph, LLMs, Generative AI, Prompt Engineering, RAG, Agentic AI, AI Agents, OpenAI API, Docker, Render, Streamlit

Education

B.Tech in Computer Science Engineering, JIS College of Engineering

Hackathon

Participant - Crazy Build Hackathon
